TECHNICAL SKILLS

Technical Languages: HTML5, CSS3, Javascript, JQuery

Applications: Node.js, Express, Bootstrap, MYSQL, Sequelize, MongoDB, Mongoose Handlebars.js, and ReactJS

PROJECTS

Weather Board | [GitHub](#) | <https://simplerer.github.io/weather-board/>

- *This application is an interactive weather site which will search for any city's current and 5-day weather forecast. The site will also remember any past searches for quick-click access.*
- *I created this application from start to finish, basing my design on a suggested template.*
- *Using Bootstrap for the design, I powered the logic with javascript and used a weather API to gather relative data for the forecasts.*

Code Quiz Kid | [GitHub](#) | <https://simplerer.github.io/code-quiz-kid/>

- *A fun short game to test some practical knowledge of an up and coming coder. This quiz will time your responses to a few questions and give you a score to challenge your friends!*
- *Using my own CSS, I designed and programmed this application to set timer and cycle through a set of quiz challenge questions using javascript and HTML elements.*

Ready-a-Readme | [GitHub](#) | **This application runs through node.js**

- *With this tool you can create a README for any project you may have created and associate it with your desired license. This application runs through the terminal using node.js and actively takes in information and dynamically creates a README.md file.*
- *This was built entirely with javascript and gives accurate license badges to any project you desire.*
